Oasis Turntable

10th Anniversary Final Edition (limited to 100)

About Brinkmann

For Brinkmann, "High Fidelity" stands as the ultimate pinnacle of achievable sound reproduction. Simply put, there is nothing better than "High Fidelity": after all, a facsimile can never sound better than the original. While some will argue that perfect music playback is an illusion. Helmut Brinkmann however, leaves nothing to chance as he works on perfecting this illusion, thus making music playback as real as possible.

Brinkmann's "10th Anniversary Final Edition" Oasis Turntable includes a 10.5 Tonearm and features an improved direct drive bearing

Introduced in 2007, Oasis was Brinkmann's first Direct Drive Turntable, as well as the first Brinkmann to use the proprietary "Sinus" motor technology. In Brinkmann's never-ending search to improve sound quality, they evaluated different types of drive mechanism as well as other alternatives.

In the end, Brinkmann decided to develop their own proprietary drive mechanism, which drives the platter directly. The drive mechanism consists of a ring-shaped permanent magnet contained in the platter's bearing and four air-cored inductors on the Oasis's chassis plate. These inductors are adjusted and driven with utmost precision to different phase angles. Thus, the ensuing magnetic field rotates the platter.

Well aware of the reason for the bad reputation and uneasy sound of the direct drive turntables of the 1970s and 1980s, Brinkmann resisted tight regulation of the direct drive mechanism. Instead, Brinkmann took advantage of the many years of experience and insight they gained from manufacturing their own "big" turntables. They use a precision bearing that is capable of smoothing out the drive's minuscule speed variations; this results in a rotational smoothness hitherto unimaginable with "classic" direct drive mechanisms.

The Brinkmann "10th Anniversary Final Edition" Oasis turntable comes fitted as standard with a Brinkmann 10.5" tonearm. If customers wish to change the tonearm, Brinkmann's clamping mechanism allows for quick and precise adjustments, without any play, of the aluminium arm base. It is compatible with tonearms from for 9 to 10.5-inches.

The platter is made of a special resonance-inhibiting alloy of aluminium, copper, magnesium and other materials. A crystal glass platter top layer and a screw-down record clamp allow any vibrations to be quickly absorbed by the platter.

Finally, three height adjustable spikes allow for a precise levelling and optimal contact of the turntable to your choice of platforms (although we recommend the HRS' M3X2 Isolation Base).

The optional Brinkmann Rönt II vacuum tubed power supply is the perfect addition for listeners who want to get the very best performance from the Oasis Turntable.
